

Welcome...

...to our Kanya UK Newsletter April 2018, aiming to bring you the latest in new products and services, company news and the latest project applications using the Kanya aluminium extrusion profile system.

Having been the first aluminium connecting system to be developed way back in 1975, today's product range is a result of continual improvement and illustrates Kanya AG's commitment to investment in research and development. With such innovations, the Kanya aluminium build system continues to provide engineering solutions suiting a wide range of purposes.

We feature our latest application examples seen in the factory recently, to inspire you for your next project. So please get in touch for a free design and quotation, or order a kit of parts from our online store at www.kanya-uk.co.uk.

Latest case studies

Custom frame for iKamper

iKamper tasked Kanya UK with creating a framework for their camping innovation.

iKamper, an innovative company specialising in roof top tents, had a requirement for a framework built from Kanya aluminium profiles to fit inside a trailer. The framework is designed to take the loading of their roof top tent as well as the campers sleeping within.

The roof top tent innovation, called Skycamp, is usually fixed to the roof of a vehicle, however with the trailer addition, more campers can be accommodated...and quickly too, as the roof top tent can be set up in less than 1 minute.

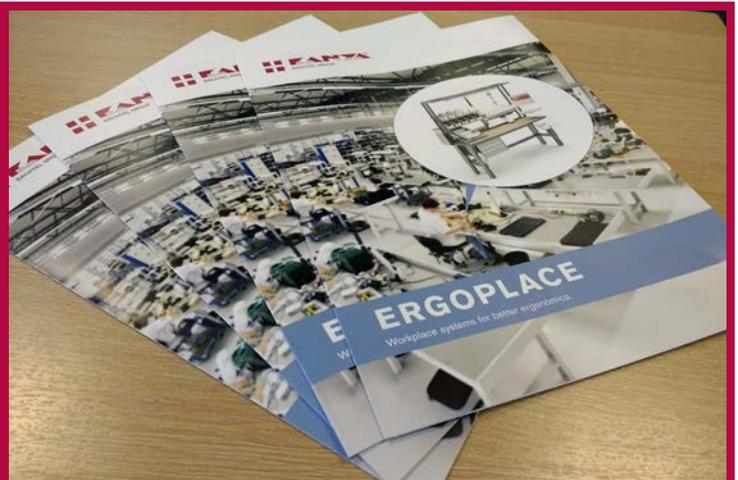

iKamper exhibited this latest innovation at the Camping and Caravan Show at the NEC Birmingham in February.

The Ergoplace Workbench

This ergonomic workstation (right) comes complete with lighting and electric height adjustment and can be custom designed to suit your working practices. Use our Novus ergonomic accessories such as monitor arms, tablet holders and laptop holders to create an efficient workspace.

See this workbench being demonstrated at the Mach Show Stand H20-838 from the 9th to 13th April 2018, and pick up a copy of the new Ergoplace brochure at the show too!

In the factory...

Robot Enclosures

This octagonal structure (left) currently being assembled is for clients Fanuc, an automation company.

Constructed from Kanya aluminium profiles finished with satin anodise, a mixture of 5mm clear polycarbonate for windows and the company branding yellow for cladding panels is used. Access doors are provided on opposite sides of the booth, with low level doors too. A false floor is provided at waist height within the enclosure with an aperture for the robot assembly.

The structure will eventually contain a robot device which will protrude through the aperture in the false floor. Fanuc will be using this as a demonstration piece to be transported to various events and exhibitions. Infact, it will be appearing at the Mach Exhibition at the NEC in Birmingham, where Fanuc will be exhibiting at stand H19-610.

"We are very happy with the cell – the shaped windows look really good! A number of people have already commented on the quality of finish".

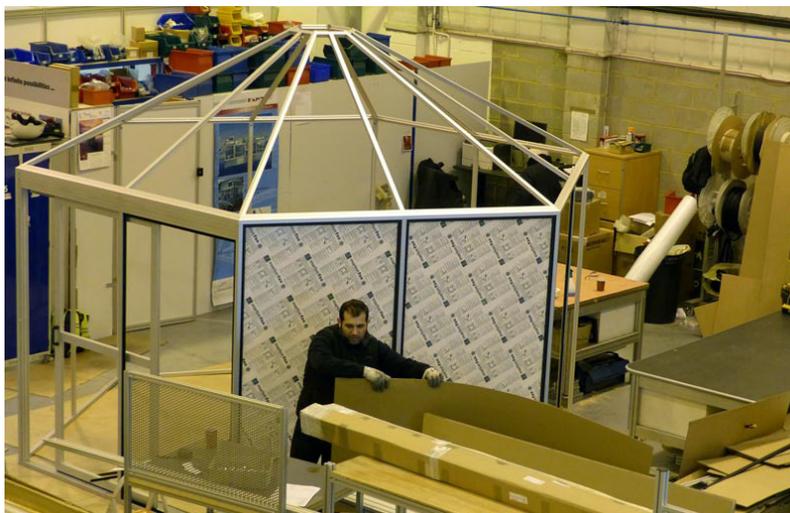

Mechanical Lifting Trolley

This mechanical lifting trolley (above) grabbed attention in our factory and on social media. It's ideal for lifting equipment into place, and operates with a crank handle and pump.

Building a Hexepod

Our Kanya UK team have been busy building a hexagonal framework in the factory during March (see left). The mammoth structure, called a Hexepod, was partially constructed in the factory before being delivered to clients' Marine Fabrication. When completed, the hexepod will become a revolving hospitality suite. We're looking forward to seeing how this project turns out.

Do you have any photos of your completed Kanya project to share?

We'd love to hear from you!
